

Dananjaya Cahyo Kusumo

DevSecOps | Platform Engineer | Cloud Native Infrastructure

 Tangerang, Indonesia  dananjaya.cahyo.kusumo36@gmail.com  0811-8412-217  danack10.github.io
 dananjaya-cahyo-kusumo-3064832b6  danack10

Summary

Computer Science graduate transitioning from offensive security research into DevSecOps and Platform Engineering. Leveraging an attacker's mindset to architect highly resilient, GitOps-driven Kubernetes infrastructure, building the secure systems I used to test. Currently engineering an end-to-end Cloud Native environment utilizing OpenTofu, ArgoCD, and HashiCorp Vault.

Experience

Independent Project , End-to-End Platform Engineering & GitOps Infrastructure - Engineering Lifecycle: Architecting and securing a highly available Kubernetes cluster natively on Kali Linux as part of an ongoing 10-phase DevSecOps infrastructure build. - Infrastructure as Code (IaC): Provisioned automated and reproducible infrastructure environments using OpenTofu, establishing declarative configuration management. - Container Orchestration & Networking: Deployed microservices on K3s (Kubernetes), utilizing Traefik as an ingress controller to manage robust routing and load balancing. - Continuous Deployment (GitOps): Implemented ArgoCD and Helm for automated synchronization of Kubernetes cluster states with Git repositories, eliminating manual deployment drift. - Secret Management: Integrated HashiCorp Vault with External Secrets Operator (ESO) within the Kubernetes cluster to securely inject and manage sensitive credentials.	Tangerang, Indonesia Jan 2026 – present 5 months
Freelance Developer , Client Data Management Web Application - Engineered a dedicated frontend form that dynamically writes unique client records to the primary Database sheet while simultaneously appending timestamped entries to a separate ClientData log sheet. - Troubleshoot and mapped correct column logic to ensure robust data integrity between user inputs and database fields.	Tangerang, Indonesia Dec 2025 – Jan 2026 2 months
Bug Bounty Programs , Independent Security Researcher - Offensive Security Testing: Conducted comprehensive vulnerability assessments and reconnaissance on production web applications to identify and document exploitable security gaps. - Vulnerability Analysis: Analyzed infrastructure misconfigurations and application logic flaws, applying deep knowledge of the complete attacker lifecycle. - Penetration Testing: Utilized industry-standard toolsets within Kali Linux environments to intercept, manipulate, and analyze network traffic for security auditing. - Infrastructure Remediation: Leveraged offensive security findings to transition into DevSecOps, focusing on remediating underlying infrastructure vulnerabilities at the root level via Infrastructure as Code (IaC).	Tangerang, Indonesia Jan 2025 – Dec 2025 1 year

Education

B.S.	Telkom University , Computer Science - Focus on underlying compute layers, networking, and software engineering. - Developed a strong theoretical foundation in how distributed systems operate.	Bandung, Indonesia Aug 2018 – May 2024
-------------	---	---

Skills

Infrastructure & Ops: K3s / Kubernetes, OpenTofu (Terraform), Traefik, Linux (Kali / Ubuntu)
CI/CD & Delivery: ArgoCD (GitOps), Helm, Docker, Git
Security & Secret Management: HashiCorp Vault, External Secrets Operator (ESO)
Scripting & Languages: Bash, Python
